

## Customer Paging System

The Wireless Waiter Pager contains a single base station and 10 pagers.

With the Pager a customer can be notified instantly once their food is ready by flash and vibration. It helps reduce labor cost whilst improving customer retention and enabling fast table turnaround.

### Main Features

#### Single Paging

The base station can call the registered pager, the pager will flash and vibrate to notify the customer.

#### Multiple Paging

All the pagers can be registered with single station numbers, all the pagers will flash and vibrate once the base station sends the alert.

#### Improve Customer Service

Notify the customer instantly when their food is ready.

#### Easy Installation

As this is a wireless system, installation and configuration is very simple.

#### Long Service Range

300m service distance. The base station will send an alert if the pager goes out of range.
